Accessory Marketing's Frequently Asked Questions

TOWING

Q. Why are the **cooler kits** needed to install the Trailer Hitch?

A. On vehicles equipped with a Trailer Hitch, the P/S Fluid Cooler and ATF Cooler Kit are required to maintain the proper temperatures of the P/S fluid and ATF when the vehicle is towing a heavy load at high speeds or up an incline.

Q. Are the **cooler kits** required to install the Trailer Hitch if the customer plans to use the hitch to carry a bike or some other light-load cargo?

A. Yes. The accessory Trailer Hitch is designed to tow loads up to 3500 lbs., and the customer may decide to use the Trailer Hitch for this purpose in the future. The customer may also sell the vehicle, and the new owner may not be aware of the cooler requirement to use the Trailer Hitch. In either situation, improper use of the Trailer Hitch is possible and could result in severe damage to the vehicle. (Refer to the Owner's Manual for additional towing information.)
