

## How to Flatten Rolled Cargo Trays

1. Place a heavy object on both ends of the cargo tray
2. Leave it out in a warm place or in the sun for a couple days
3. A hair dryer on a low setting or light heat can be used to go over any creases and will help smooth those out.

Following these steps will help the cargo tray take its original shape and minimize the creases.

*\*If it is a folding cargo tray, set it to the folded position and follow the steps above\**
